

## **MENHADEN CONDENSED FISH SOLUBLES PRODUCT SPECIFICATIONS**

### **PRODUCT DESCRIPTION**

Condensed Fish Solubles are obtained by evaporating excess moisture from the stickwater, aqueous liquids, resulting from the wet rendering of fish into fish meal, with or without removal of part of the oil.

### **TYPICAL ANALYSIS**

Typical analysis will vary depending on the amount of concentration during processing.

<b>Parameter</b>	<b>Typical</b>	<b>Range</b>
Protein	27.35%	24 - 28 %
Fat (Oil)	6.28%	3 - 10 %
Moisture	50.87%	52 - 60 %
Ash	8.00%	5 - 10 %
TVN (Total Volatile Nitrogen)	74mg/100g	80 - 250 mg/100g
pH	4.0	3.5 - 4.5
Nitrogen	4.38%	3.8 - 4.5 %
Phosphorus	0.63%	0.4 - 1.0 %
Potassium	1.27%	0.4 - 1.5 %
Sulfur	2.28%	0.8 - 2.5 %
Weight per Gallon	9.403/gal	9.0 - 10.0 #/gal
Viscosity	(See Viscosity Chart – Attached)	

### **PHYSICAL PROPERTIES**

Appearance: Viscous brown liquid

Odor: Fishy

### **FACTORS INFLUENCING THE PRODUCT**

- A pH value greater than 5.0 may cause fermentation of the condensed fish solubles resulting in quality deterioration.
- The acidity of fish solubles should be considered with respect to pumping and handling equipment and storage facilities.
- The product may contain and should be checked for sediment. Storage tanks should be stirred/circulated periodically by mechanical means. Never use air to stir solubles.

78	25.55	-	950
79	26.11	-	925
80	26.67	-	900

Typically condensed fish solubles will be in the regular category but in some cases fish produce stickwater that produces solubles that can be very viscous and heavy.
